

Miscellaneous

- **Show/Hide map toggle**

You can now hide the maps at the top of your analysis pages.

Projects

- **New Save Projects**

You can now save projects independently of the Action Plan.

Remediation Assignments auto save, and you will see them the next time you log in, even if you closed your browser.

- **Improved Below Criterion Change Warnings**

If you have custom remediations, and change the chart, sometimes those will be removed. We will alert you before this happens, allowing you to stop before any work is potentially lost.

We now warn you for the below scenarios:

- Changing chart visibility for on/off/shadow lines
- Changing the threshold value
- Modifying Depol alignment or interpolation

- **Improved Remediation Group Editor Form**

Underneath the readings table, you'll find the remediation group editor when you have selected a remediation group. It joins groups in a much more intelligent way than before.

Protected Action Plans

- **Project Sync/Un-sync**

Once an Action Plan has been approved, it will be disconnected from the project. Any changes to the project will not impact the Approved Action Plan in any way.

- **Archived Data**

We now archive the below datasets, ensuring any changes to your project will not impact your Approved Action Plans

- Surveys
- Below Criterion Data
- Custom Remediation Groups

- **Action Plan Save Notes**
When you modify and save your action plan, you will have the option to summarize what changes were made.
- **Action Plan Save Notifications**
When you save your Action Plan, you will see a notification detailing which step of the save process you are on.
- **Action Plan Download Notifications**
When you download an action plan, you will see a notification detailing which step of the download process you are on.
- **Action Plan now tracks who modified it last.**
- **Auto Check for Changes on Close**
When you close your Action Plan, it will auto check for changes. If changes are found, it will prompt you allowing you to optionally save your changes before closing the Action Plan form.

UI

- Performance Improvements

Automated Testing

- We have added additional automated algorithm tests for below criterions, interpolation, and alignment.

Data Migration

- All existing action plans have been migrated to new data structures.

Architecture

- New rework of existing frontend architecture, introducing modular techniques.
